

Your beautiful wooden floor, that makes your house so cosy and elegant, deserves constant care. With just a little effort and time you can maintain its characteristics of elegance and functionality for years.

Our Recommendations

- Treat your wooden floor with care from the beginning! It takes from 8 to 10 days for a newly varnished wooden floor to reach the maximum resistance. During this lapse of time, avoid laying rugs or dragging heavy furniture, and put protective pads under chairs or movable pieces of furniture.
- Pay attention to environmental conditions! Wood is a living material and therefore is affected by changes in temperature and humidity. Possible variations of the wood volume may cause widening of the flutes between the wood strips and consequently breaking of the varnished surface.
The ideal conditions for keeping a wooden floor in good condition are: temperature between +15 and 24 °C, and humidity between 50 and 65%. The same conditions are recommended for the health of the people living in the house.
- Avoid abrasive detergents.
- Use only the manufacturer suggested cleaning and maintenance products.
- Before starting any cleaning and maintenance treatment, eliminate dust.
- Important advice! While cleaning your wooden floors never flood them with water nor detergents. Use only a mop or a soft cloth, soaked and wrung thoroughly.
- Use only brushes with non-rotating, natural-fibre bristles.

Sealed wood floors need care to keep their characteristics of elegance and functionality.

CARVER, taking advantage of its long-running experience in the parquet field, has developed a range of products intended for professional and domestic use to clean, polish and waterproof the sealed parquet.

Maintenance PARQUET

Instructions
for the Maintenance
of Varnished
Wooden Floors

CARVER

CARVER

Water-based products suitable for domestic use in cleaning and maintaining varnished wooden floors

CARVER water-based maintenance products can be used as often as necessary, provided you do not flood the floors with water nor with detergent solutions.

The technical data sheets can be downloaded from our website www.carver.it

Sealer

Ecosigil Parquet

Water-repellent sealer. Before applying ECOSIGIL PARQUET, wash the floor thoroughly with DETER PARQUET.

➡ Use it to seal the joining lines (ends and edges) of pre-finished and traditional varnished parquet. It prevents the wood, especially the lighter one, from darkening along the joining lines because of numerous washings.

⚙️ Shake well before use! Mix 1 part of ECOSIGIL PARQUET with 5 parts of water, then rub the floor using a mop or a soft cloth, so that the solution penetrates into the fissures. Polish immediately after drying (or within 1 hour) using the polisher with the soft pad. The polishing is necessary to even the surface. The product develops its water-repellent properties in about 2 days, after which it is possible to do all the usual cleaning and maintenance operations.

Concentrate polish

Polish Parquet

Self-shining polish concentrate. The detergents contained are over 90% bio-degradable.

➡ To maintain and protect varnished wooden floors of all kinds.

⚙️ Dilute 1 part of POLISH PARQUET with 5 parts of water and wash the floor with a mop or a soft cloth. The application will be dry in about 15 minutes. No shining is necessary.

Ready to use polish

Pronto Polish Parquet

Self-shining polish, ready to use. The detergents contained are over 90% bio-degradable. Also spray available.

➡ To maintain and protect varnished wooden floors of all kinds. It is also suitable for varnished wooden doors and furniture.

⚙️ Pour the undiluted product on the surface and spread it with a mop or a soft cloth. The application will be dry in

about 15 minutes. No shining is necessary.

Detergent

Deter Parquet

Highly concentrated detergent. The surface-active agents contained are over 90% bio-degradable.

➡ To clean very dirty or greasy wooden floors thoroughly.

⚙️ Dilute DETER PARQUET using the cap of bottle to dose the product (1 capful to 1 litre water). Wash the floor with a mop or a soft cloth. After drying treat the floor with our wax or polish.

Self-shining wax

Bel Parquet

Self-shining concentrated wax. Also spray available.

➡ Product based on natural waxes, particularly developed for the protection and maintenance of varnished wooden floors.

⚙️ Ready to use. Can be easily applied with a damp cloth. No shining is necessary; the floor can be walked on immediately after drying. We recommend applying it after cleaning with DETER

PARQUET.

Emulsion on the base of waxes

Ravvivate

Emulsion on the base of synthetic and vegetable waxes with perfumed essences.

➡ Especially developed for the maintenance and protection of sealed wood floors. Also suitable for marble and tile floors.

⚙️ Pour the product on the clean floor and level it with a moist cloth. Let the floor dry without rinsing. When dry,

polish using a buffer or a polisher with soft pads.

Stain-remover

Net Parquet

Highly concentrated stain-remover, on the base of not very aggressive solvents.

➡ Allows to remove stains of various kinds, in particular glue stains, without damaging the varnish film nor leaving any traces or marks. Very useful while laying the pre-finished parquet.

⚙️ Ready to use. Pour a little NET PARQUET on a soft cloth and rub the area you have to clean. Should some stains prove

obstinate, leave a cleaner-soaked cloth on the spot for about 10 minutes, then remove the stains by rubbing the area again.

for professional use
